

Biography

Creative, Flexible, Driven

Hello, my name is Chase Humphreys. Currently I am student at Napa Valley Junior College, and I am pursuing an A.S. degree in Digital Design and Graphics Technology. Throughout the courses provided in this (DDGT) program, I'll become proficient at working with software such as AutoCAD, Revit Architecture, Inventor, Photoshop, 3ds Max, Premier, After Effects, and Dreamweaver. After receiving my degree, I plan on using my skillset to be as diverse as possible in the job industry. I would like to work in both digital design and engineering, although my main interest is currently in the possibilities of photogrammetry.

I have always been drawn to the physical aspects of design, whether it be the unique architecture of different time periods and places, or the natural appeal of a well-designed sports car. In my younger years of adult-hood I was employed as a carpenter, and had the opportunity to remodel several houses in Sonoma and Napa counties that were Victorian-era historic buildings. I would disassemble, fix, and replace the design by replicating the build style, or build new structures which would complement the existing structure aesthetically. From these experiences I have developed an appreciation for the unique aspects of a design's form and function.

My drive as a designer is derived from that appreciation of the unique. I'm fascinated by the possibility of replicating existing physical objects, and using them in various applications. My goal in my career is to invent functional products, to create a business that specializes in replicating sentimental material possessions and places in both physical and virtual spaces, and to continue to add to my valuable skillset through job experience.
