

5. Did your project print successfully on the first try? If not, why?

6. If your design failed, what design considerations did you not account for?

7. How did your design evolve through multiple iterations (if any)?

8. Did your product require any post-processing? If so, what (Epoxy, dowels, standard hardware for assembly, etc.)?

9. What did you find to be the most challenging aspect of the design after the design was completed?

10. If you were to print this project again as another iteration (round 2), what changes to the design would you make?
